

## STUDENT ACADEMIC INFORMATION SYSTEM

The **Student Academic Information System (SAIS)** is a comprehensive data management system designed to manage student processes and records. SAIS is capable of handling processes that cover the entire student lifecycle: from admission, registration, to enrollment to graduation and alumni tracking. The system is also capable of obtaining, processing, retrieving, and updating student, faculty, and alumni information, as well as academic master data such as curricula and course information. As one of the core information systems, SAIS will eventually be integrated with other systems, including the Human Resource Information System (HRIS), Financial Management Information System (FMIS), iLib, UPCAT, ST, and Learning Management System. This integration will be implemented as soon as the data of the other systems are completed and made available.

To date, SAIS has the following operational modules:

- Self-Service for students and faculty
- Campus Community
- Records and Enrollment for students, faculty, and staff
- Curriculum Management
- Student Financials
